Blanc - Huacaya

Armelle of the Alleghenies
(Fauve moyen (Couleur pure/solide) - Huacaya)

Description:

This amazing Verticase male is a full brother to Zeus. Need we say more? The Verticase legend lives on.....

Alpacas of the Alleghenies are offering an Elite Snowmass Quechua Grandson! The name ?Snowmass? is synonymous with outstanding elite quality alpacas. Snowmass Alpacas represents an accumulation of the world?s finest and most advanced breeding genetics. This is a great opportunity to add the Snowmass genetics to your breeding program through Alleghenies? Adras. Adras is the product of Quechua?s Verticase; his fleece is extremely fine and amazingly dense! Verticases' skin biopsy proves his density to be 110 follicles/sq.mm which is off the charts!!! Verticase is one of the most Elite Herd sires in our Industry today. Upon reviewing Adras? pedigree on the sire?s side, you will find the names of most of the top Herd sires in U.S. history?Peruvian Hemingway, PPeruvian Caligula, 6Peruvian Accoyo Elite, Snowmass Ccatanca, and PPeruvian Vengador. Verticase has passed his amazing fleece characteristics on to Adras. Adras? density and structure is superb! Adras has superior fleece characteristics, super staple length that is very consistent. Substance of bone with the fleece characteristics and his genetics - WOW! I truly think Adras could give his full Champion brother some real competition.

With the passing of Quechua?s Verticase; this is an isolated opportunity to add the Elite Snowmass Quechua genetics to your breeding program.
