Kg/Jahr

(Entnommen an 26/06/2020 im alter von)

Faser-Untersuchungsorganisation: Art of Fibre

Beschreibung:

This young male has always been a favourite of mine. And now as an adult he does not disappoint. He is displaying very good fineness, exceptional uniformity of micron and good density. He is a well grown male on a solid frame. He has a beautiful high frequency crimp style that displays beautiful brightness with a lovely buttery handle. With such dark points we expect him to go on and produce black when bred to dark colours, as does his brother and sire. He is out of our 3 x Champion fawn female and our Australian Kurrawa Legends Bandido. These are unique coloured genetics for a serious breeder wanting to advance the darker colours in their herd.

We are only releasing this male as we already have these top quality genetics in our herd.
