*(taken on 6th May 2022 at 1 Year and 11 Months of age)*

**Fibre Testing Authority:** Art of Fibre

### Description:

Polka Dot is a dramatically marked appaloosa female. She has an appaloosa sire and dam, so potentially could be a homozygous carrier of the gene. She is well trained and very good on a head collar. She was mated at 2 and 3 years of age, but has not scanned pregnant, hence her price. She will be transferred as a breeding female, but there's no guarantee that she will produce offspring. Her full mating history is available, she has had no reproductive examination, but her general health is very good.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested every three months and only given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for 4 weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

**Number of Crias bred from female:** 0
