(taken on 22nd July 2024 at 2 Months of age)

**Fibre Testing Authority:** European Wool Testing Authority

### Description:

Lightning is a quick learner, she is really benefitting from camelidynamics style handling and is now good on a head collar and whizzes round our alpacagility course. I haven't DNA tested her for colour, but it is possible she is a cryptic grey, there is an interesting darker stripe on the back of her head.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested about every six weeks and only then given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for at least four weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.
