Vacht: (1e)

19.10µ SD (standaardafwijking) 4.00µ CV (variatiecoëfficiënt) 20.70% SF 18.00µ

(Genomen op 22/07/2024 op de leeftijd van 1 Maand)

Wolanalyse-organisatie: European Wool Testing Authority

Omschrijving:

Xavier is a lovely traditional appaloosa. He looks better every month. He is very calm and easy to do husbandry with. He is coming along very well with his head collar training and is getting good at alpacagility. In fact so good he is part of our alpacagility show team at the Nationals. I believe he will make a good stud male.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested about every six weeks and only then given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for at least four weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.
