**Date of Birth:** 19th June 2016

**Fleece:** (5th)

30.00µ SD 6.50µ CV 21.80%

*(taken on 20th April 2021 at 4 Years and 10 Months of age)*

### **Description:**

Flo is a calm, friendly female, she has had five cria, including a striking appaloosa female (she can be seen at Mullacott Alpacas). Other cria were light, white, light and mid brown. She is head collar trained. She is a very unusual silver grey, caused by the harlequin gene, rather than a grey pattern gene.

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested about every six weeks and only then given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johnes's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for at least four weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

**Number of Crias bred from female:** 5
