**Date of Birth:** 11th July 2018

### **Fleece:**

25.70µ SD 4.40µ CV 17.00%

*(taken on 13th April 2021 at 2 Years and 9 Months of age)*

### **Description:**

Poppy is a tall girl, with very striking markings. Her appaloosa genes show in her spotty face and ginger belly spots, but her main body colour is a lovely grey brown harlequin. She is head collar trained and an easy girl to own. She has had one harlequin, two white and one black cria (all female). She has scanned pregnant in 2026 mated to Rosecradoc Icerberg (grey)

Mullacott Alpacas is a farm with high welfare and biosecurity standards. All alpacas are individually faecal tested about every six weeks and only then given appropriate treatment for any gut parasites if necessary. The whole herd is currently vaccinated with Bravoxin10, with six monthly boosters. A voluntary bTB test is carried out on every alpaca in the herd, annually. All deaths (over around 3 months of age) are subject of post mortem, to check for any undiagnosed health conditions.

We take bio-security very seriously, with all incoming alpacas thoroughly treated for any gut parasites, before moving onto the farm and then faecal tested on arrival and before leaving quarantine. Pre-movement tests are carried out for bTB and Johne's Disease (We have never had either disease diagnosed on the farm). All incoming alpacas are kept in quarantine for at least four weeks before joining the main herd.

We are willing to conduct any pre-movement tests/parasite treatments that you request.

**Number of Crias bred from female: 4**
