Staple Length 95 mm

(taken on 13th May 2022 at 3 Years and 11 Months of age)

Fibre Testing Authority: Art of Fibre

Description:

Beck Brow Hit For Six is a multi-championship winning brown male who is available for outside stud services. He is a son of Gilt Edge Samurai of Beck Brow, an Australian import who has sired many championship winning cria and continues to be a highly influential herdsire at Beck Brow Alpaca. Hit For Six shares the same elite dam, Bozedown Campari, with his highly successful half-brothers Beck Brow On The Money and Beck Brow Back Of The Net. Hit For Six is a great asset to our breeding programme, producing many championship winning and stud quality progeny.

The fleece on this male is really exciting! He is sporting a fine, deep chocolate brown fleece with a phenomenal amount

of density. His fleece is very bright and stylish with mid-high amplitude and mid frequency crimp. As he is so dense, his fibres are really well aligned and create well organized, tightly packed, pencil-width staples all across his blanket and beyond. As you can see, he has very little guard hair and carries a good fleece length on his neck.

Conformationally, Hit For Six does not disappoint either. He is a compact male who is correctly balanced and proportioned. His stands on legs with correct leg angulation, great substance of bone, and very good coverage. He has a lovely, true to type head, with good teeth, a correct bite, and excellent coverage on his extremities. He has a calm and relaxed disposition, making him a pleasure to work with. These are all strong genetic traits that he passes on to his cria as they all clearly bear his stamp. His cria are strong at birth, are quick to stand and feed, and have his laid-back disposition.

Genetically, Hit For Six has been colour tested by Futuregen as being EE/aa in colour. This means that, despite being brown, he is genetically very very dark. He is incapable of producing fawn colour when being bred to black alpacas, and he is incapable of producing a white cria from any colour. He will always darken or match the dam's colour.

Overall, Hit For Six has been, and continues to be, a real asset to our breeding programme. He has proven himself a very useful male in improving overall quality, density, fineness, coverage, and the depth of colour that we have been looking for in our coloured, black, and grey breeding programmes.

Stud Service Terms:

We strive to be as accommodating and helpful as possible to our customers! All stud services come with a live cria guarantee. Replacement stud services are available to our customers where pregnancies do not result in a cria or in circumstances where a cria does not survive through the first 2 weeks of life.

Biosecurity:

We are very proactive with our biosecurity on farm as it is very important to us. Drive By matings take place on disinfected hardstanding. Our farm is outfitted with buried badger fencing as well as deer fencing. We use foot dips routinely all around the farm and regularly disinfect our equipment. We are a TB free herd, which we have always confirmed with annual TB testing. We have also tested negative for BVD and Johne's disease. New stock to arrive on the farm is quarantined for 6 months to eliminate the chances of introducing infected alpacas into our herd. All of our herd health and testing records are available to peruse and discuss if desired.

Thank you for looking and feel free to get in touch if you have any questions or would like more info!
